

OTÁVIO GUEDES

BACK-END JAVA DEVELOPER · Spring Boot · REST APIs · Docker · PostgreSQL

otavioaredes62@gmail.com · +55 (11) 91338-0815 · linkedin.com/in/otavio-backend2007 · github.com/Otavio2704 · otavio2007-backend.edgeone.app

PROFESSIONAL SUMMARY

Back-end Java developer with self-built projects in production, including a full-stack application with applied AI (Gupify). I build complete REST APIs with Spring Boot, Spring Security (JWT + API Key), and PostgreSQL, applying OOP, SOLID principles, and layered architecture. I have hands-on experience with reactive programming (WebFlux), automated testing (JUnit/Mockito), Docker, CI/CD (GitHub Actions), and frontend development with React/TypeScript. Active in the Brazilian Java community as a DIO University Ambassador and content creator at Brasil JUG.

PROFESSIONAL EXPERIENCE

Development Intern · NicolaSec, São Paulo – SP · July 2025 – Present

- Work in development with a focus on Java, contributing to tasks that combine application code with infrastructure and security fundamentals, such as Windows/Ubuntu server administration, SQL Server, and JDBC integration.
- Apply information security concepts on a daily basis, including IAM, PAM, GRC, and best practices aligned with ISO 27001 and LGPD, while also producing technical content on these topics for the community.
- Work with bash scripting and networking concepts to support development routines and technical testing, using virtualized environments in VirtualBox (Linux Mint) for scenario validation.

PERSONAL PROJECTS

CVibe · *AI-Powered Resume Optimizer for ATS*

otavio2704.github.io/cvibe-web/

Stack: Java 17 · Spring Boot · React · TypeScript · NVIDIA NIM · GitHub Actions · Render · GitHub Pages

- Candidates lose job opportunities due to resumes poorly optimized for ATS; I built a full-stack tool (Spring Boot API + React/TypeScript frontend) that analyzes and rewrites resumes using NVIDIA NIM AI models tuned for Brazilian Portuguese.
- AI text generation blocks the user interface; I implemented an asynchronous notification system to track background processing without blocking the user experience.
- Manual deployments delay delivery and increase error risk; I set up a CI/CD pipeline with GitHub Actions for automated build, testing, and deployment of the backend (Render) and frontend (GitHub Pages).

Kytrionyx AI · *Web Interface for Local LLMs*

github.com/Otavio2704/kytrionyx-ai

Stack: Java 17 · Spring Boot 3.2 · Spring WebFlux · PostgreSQL · Docker · JavaScript · SearXNG · Ollama

- Local LLMs lacked a complete web interface; I designed a modular architecture with 8 backend domains and 14 independent JS modules, supporting multiple simultaneous sessions without thread blocking via WebFlux.
- Local assistants relied on a single search source; I implemented a 3-tier fallback chain (SearXNG → DDG HTML → DDG Instant) with SSE streaming and first-response latency under 200ms.
- AI APIs charge per token and expose data to third parties; I solved this with a 100% local stack (Ollama + SearXNG + PostgreSQL), zero cost per request, and uploads of up to 20MB with text extraction from PDF, DOCX, TXT, and Markdown.

TECHNICAL SKILLS

Languages: Java 17/21, TypeScript, JavaScript, Python (basic), SQL, NoSQL (basic)

Frameworks: Spring Boot 3, Spring Security, Spring WebFlux, Spring Data JPA / Hibernate, React

Databases: PostgreSQL, MySQL, H2, MongoDB (basic)

Testing: JUnit 5, Mockito

DevOps & Cloud: Docker, Docker Compose, GitHub Actions, Kubernetes (basic), AWS (basic), Git, GitHub, Maven, Gradle

Practices: Clean Code, SOLID, OOP, REST, Software Architecture, Scrum/Kanban, OpenAPI/Swagger

EDUCATION

Bachelor's Degree in Software Engineering · Universidade São Judas Tadeu, São Paulo – SP

January 2025 – December 2028

COMMUNITY

- DIO University Ambassador, supporting technology education initiatives.
- Technical content creator at Brasil JUG (Brazilian Java community) and active member of the Java ecosystem.

LANGUAGES

English — advanced technical reading and writing, intermediate conversation
